*1 External sensing method is used for the product because of controllability (performance). Available with internal sensing type, but the Cv value is different.

*2 When the set pressure is between 0.02 MPa and 0.1 MPa, back pressure should not exist.

■GPR-2000 Nominal Size Selection Chart (For Steam)

[Example]

When selecting the nominal size of a primary pressure regulating valve whose Inlet pressure (P₁), outlet pressure (P₂), and flow rate are 0.6 MPa, 0.4 MPa, and 600 kg/h, respectively, first find intersection point (a) of the Inlet pressure of 0.6 MPa and the outlet pressure of 0.4 MPa. Trace down vertically from this intersection point to find intersection point (b) with the flow rate of 600 kg/h. Since intersection point (b) lies between nominal sizes 20A and 25A, select the larger one, 25A.
